Results of the SRCNet review

Last September, SRCNet underwent a review that examined the current status of the project and proposed a way forward to enable its implementation within the tight time constraints. The aim of this presentation is not to go into the details of the review itself, but rather to present its results and analyse its implications for Swiss participation in the software development effort, particularly with a view to the next budget period.

Presenter: CSILLAGHY, André (University of Applied Sciences North Western Switzerland (FHNW))

Session Classification: Monday morning
