

LMC peer review 2

- Many concepts behind TANGO implemented
- Pay attention to the Attribute vs Command difference → specific to TANGO Device model
- Automatic configuration of TANGO devices (Alarm system extension, Event system extension):
 - Remember TANGO “needs” polling anyhow (caching, events...)
 - Consider configuring (defining) polling and thresholds at design time

LMC peer review 2

- Carefully evaluate whether to force on the TANGO interface model whenever existing mechanisms may fit (e.g. TANGO groups or pipes)
 - Wait for the incoming narrow vs wide interface note by Andy
 - Multiple argument Commands proposal
- Avoid opaque subsystems
- Need to clarify (persistent) Logging vs Archiving requirements
