The South African Radio Astronomy Observatory (SARAO) is a National Facility managed by the National Research Foundation and incorporates all national radio astronomy telescopes and programmes. SARAO is responsible for implementing the Square Kilometre Array (SKA) in South Africa.

MeerKAT

UHF band

L-band installed first

UHF band receivers and digitisers have been installed over the last year.

UHF band DEEP2 field

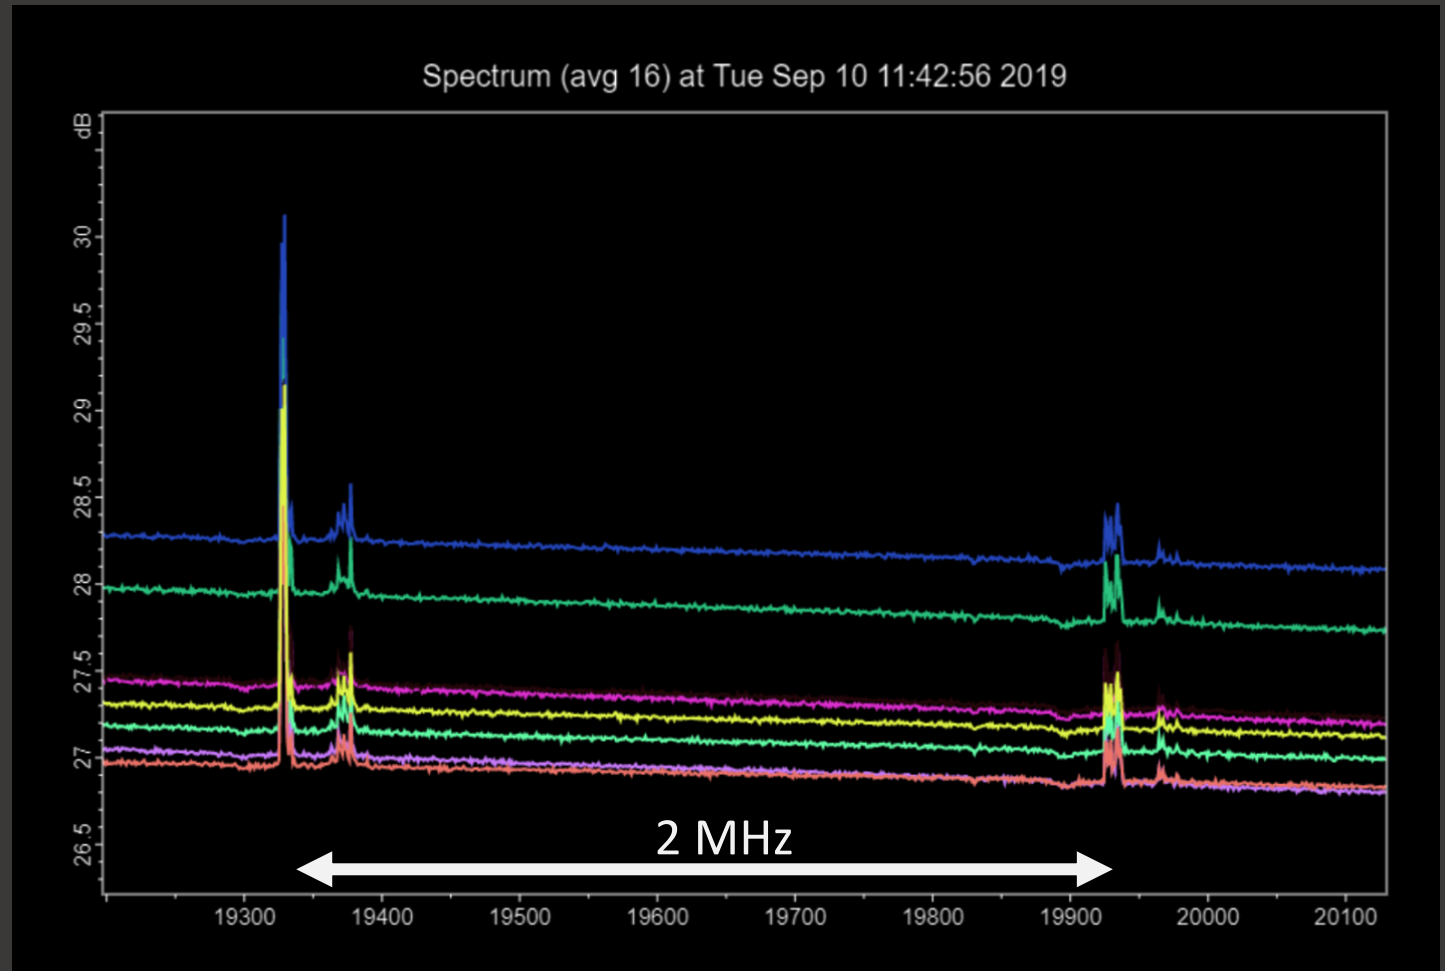

SARAO
South African Radio
Astronomy Observatory

Narrowband

Narrowband Extended mode provides 32K channels over a selected 107 MHz sub-band. (also 56 MHz, 27 MHz, etc)

Channel width of 3 kHz for velocity resolution < 1 km/s

Spectrum on right is of a Maser at G330.89-0.36, lines at 1666 and 1668 MHz.

User Supplied Equipment

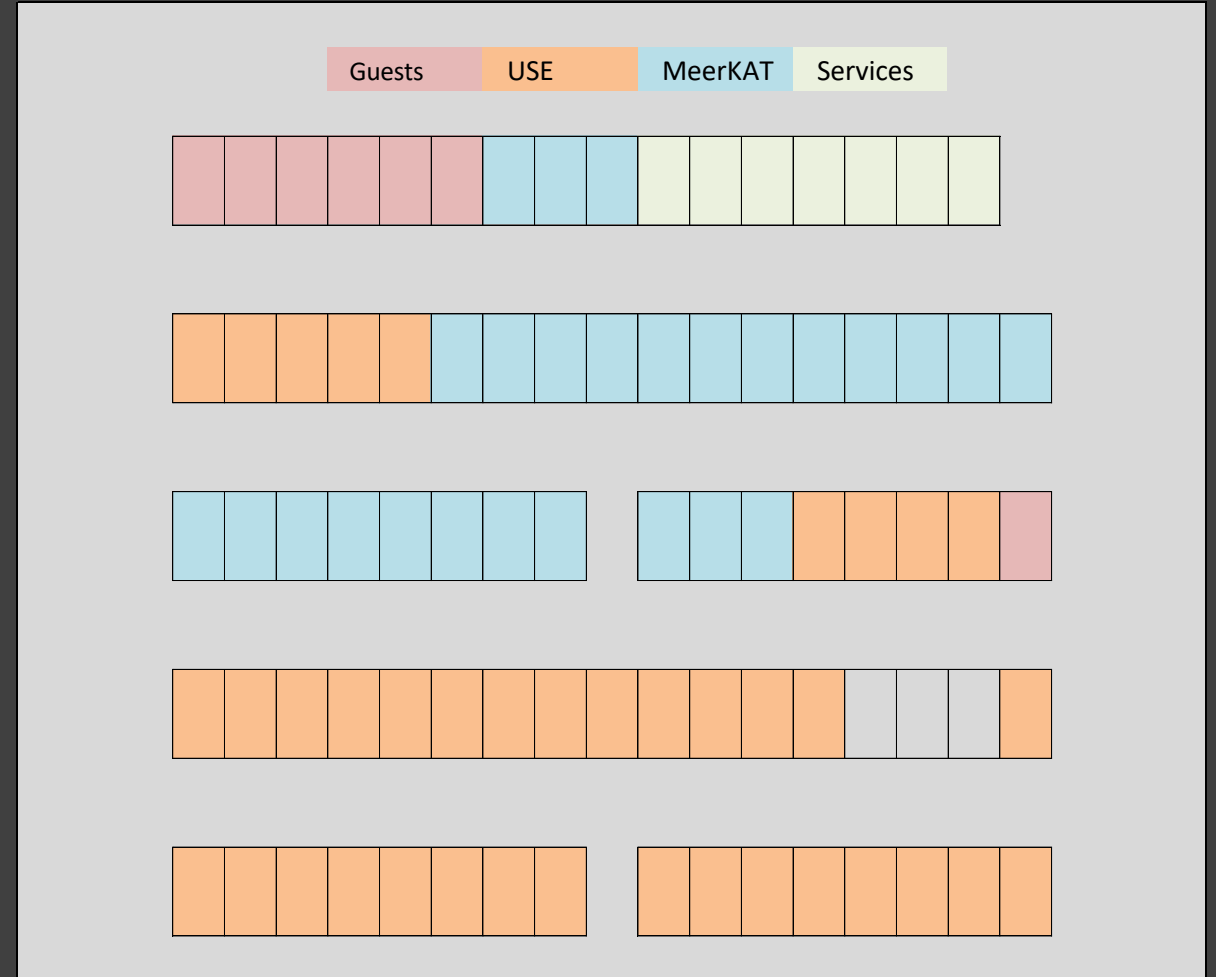

User Supplied Equipment

Making space for USE:

- Rack space
- Power
- Cooling
- Network ports
- Bandwidth to Cape Town

A significant part of MeerKAT
observing time

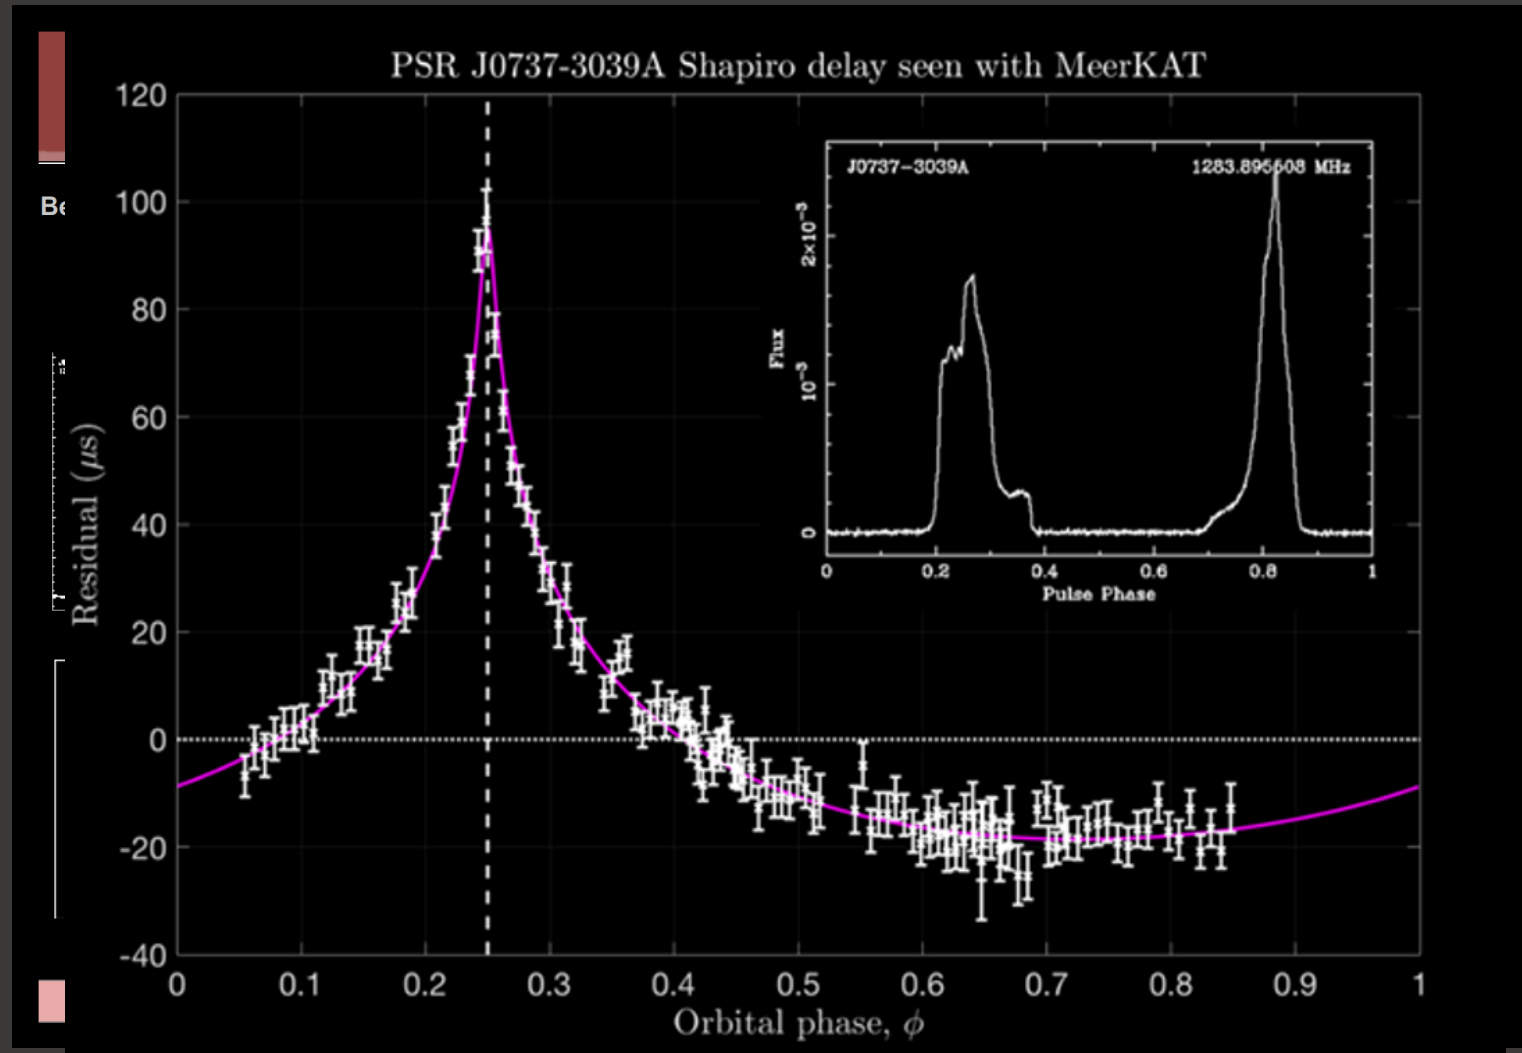

USE: Pulsar Timing USE

Timing back-end developed
at Swinburne University

Web interface with real-time
displays

Single orbit of the double pulsar.
Credit: MeerTIME Collaboration

USE – FBF+APS+TUSE

Filterbank Beamformer

- Fully commensal, generates >1000 beams
- 60 second voltage buffer

Transient search

Recent results

- Repeated FRB detection
- Simultaneous timing of three known pulsars

USE - APSUSE

Accelerated pulsar search on each of the 1000 beams

USE - BLUSE

Observing program

- Observing fraction $> 50\%$ from April to date
 - Almost 3000 hours of science observing since 1 April
 - Another 1300 hours of engineering and commissioning observations
- Three of our Large Survey Projects are taking data
- First open time Call to South African PIs resulted in 38 approved projects.
 - 32 projects completed
 - 532 hours observed
- Five DDT proposals observed
 - 53 hours
- MeerKAT data featured in three papers in Nature this year

Integration Lessons Learned

AIV process

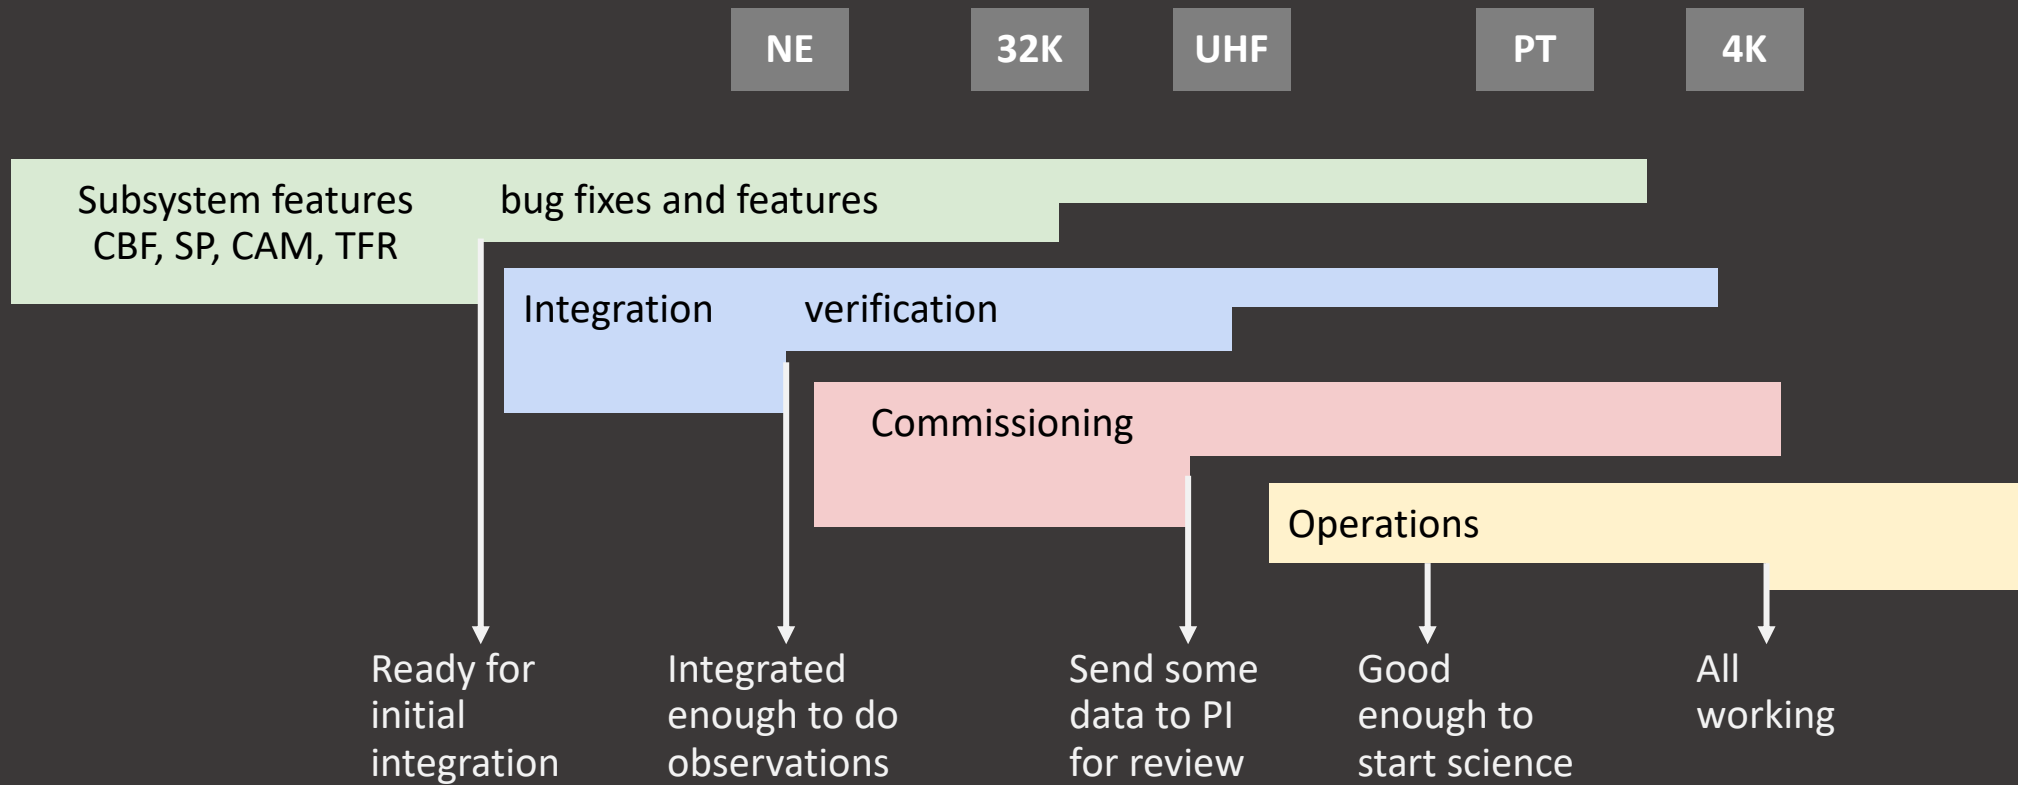

Subsystem features
CBF, SP, CAM, TFR

Integration
Verification

Commissioning

Operations

AIV process

Integration Lessons Learned

- Early integration
 - a blurring, up and down, in the right hand side of the V
 - before qualification of the subsystems
- Continuous release of features through the sausage machine
- Integration lab
 - Essential for bringing things together in a low-cost environment
- On the real telescope
 - The only full-size laboratory you have
