Research
Foundation**

Design by Mind-map vs reality

Design by Mind-map vs reality

Container Terminal Operations

- Ensure optimal resource usage
 - Invest in Bottle-necks to maximize resource usage
- Optimization of usage of “critical” investment
 - Have excess supplies and services to support

...Could Consider:

- Containers as required observations,
- Ships as when then can be done,
- Cranes as the telescope combining the resources.

-

To Improve a
system,
we need to measure the
system.

Optimization of usage of **critical investment**

“As far a weighted usage goes, sometime we might just be using 4 antennas (say for some pulsar test), and that's all we want, so we're using the telescope just as we want it – so thats 100% success.”

Science Operations VS Telescope Operations

Optimization of usage of **critical investment**

“As far a weighted usage goes, sometime we might just be using 4 antennas (say for some pulsar test), and that's all we want, so we're using the telescope just as we want it – so thats 100% success”

production system which is the process

that converts inputs into outputs.

concerned with the design, building,

and use of machines, and structures.

systematic study of the structure and

behavior of the physical and natural.

JIRA

Is it possible to track how long and why the system is unavailable?

The tools are there...

Do we trace the system unavailability?

Side effect of Design by Mind-map

Do you find...

- Don't investigate – it will take too long.
- Nobody knows when it changed or why. (Somebody did it for some other reason)
- “I think” ... (difficulty in verification – time it takes to get data)
- Time it takes to access / find information.
- Broken chain of emails or messages.
- Procedures of procedures and deviations of procedures. (...and the duplication of information)
- Irrelevant information overload.

Single source of Data

**National
Research
Foundation**

A large white radio telescope dish is shown from a low angle, pointing towards the sky. The dish is supported by a complex white metal lattice structure. It sits on a thick white cylindrical pedestal. The background shows a clear blue sky and a dark, hilly desert landscape at dusk or dawn. A semi-transparent blue horizontal band is overlaid across the middle of the image.

ATNF visit 2017

PRESENTER: Rupert Spann

**science
& technology**

Department:
Science and Technology
REPUBLIC OF SOUTH AFRICA

**National
Research
Foundation**

SKA South Africa, a Business Unit of the National Research Foundation.

We are building the Square Kilometre Array radio telescope (SKA), located in South Africa and eight other African countries, with part in Australia. The SKA will be the largest radio telescope ever built and will produce science that changes our understanding of the universe
